DETAILED ACTION

Allowable Subject Matter

Claims 1-13, 15-18, 20-23 are allowed.

The following is an examiner's statement of reasons for allowance: The examiner notes that the closest prior art is believed to be Han (KR 10-2002-0021093) and Contevita (US 3396502). The instant application differs from the prior art in that each preassembled segment (SES), which includes vertical and horizontal beams and a rebar screen, is lifted into place (as a whole) prior to the pouring of the concrete. The preassembled segments are each lifted as a unit for placement during construction of the SES. A peripheral structural steel subassembly (PSS) is constructed about the SES, and one or more floor structures are installed that are supported by the SES and the PSS. Because the floor structure is supported by the SES and PSS, unlike conventional shear core construction methods (like in Han), the steel support structure can precede the concrete shear core during construction. The SES structural members that support the floor structure during construction are disposed in the volume into which the concrete will be poured. Therefore, another novel feature is preassembling structural members for the SES, and a rebar curtain to form segments, and lifting each of the preassembled segments as a unit for placement during construction. This aspect is most clearly shown in FIGURE 3 of the present application, and is not found in any of the prior art of record.

Art Unit: 3635

The examiner notes that the closest prior art of record (Han and Catevita) actually teach lifting the elements (beams, columns and rebar) in individual pieces rather than in one preassembled segment.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
